

## UN550-5

### Optimized Workstation For Stitching Waistbands Of Skirts And Trousers

#### Feature

1. Sewing equipment with positively controlled compensating foot and spring – mounted edge guide for accurate sewing in the shadow (standard equipment) Topstitching through the waistband on the waistband edge at 1,6 mm with optional compensating foot for flexible use, e.g. for ladies' trousers and skirts
2. Presser foot stroke adjustment ensures trouble-free stitching of the waistbands, even with thicker materials e.g. in pile fabrics like velvet and cord-sewing cross seams and belt loops is hereby also significantly simplified
3. Perfectly fitting waistband processing due to machine base plate with special design
4. Unhindered handling by means of ergonomically shaped table top
5. Flat, pucker – free seams due to needle feed and top puller feed
6. Intermittent working top puller feed with absolutely constant speed
7. Stitching straight and curved waistbands of skirts and trousers in seam shadow or stitching on the waistband edge

#### Technical parameter

Model	Max Sewing speed	Electricity	Maximum presser foot lift	Rear mop wheel	Needle system	Direct-drive motor power
